

The Digital Credential You Can Trust™

**Electronic Desktop  
Document Signing  
Made Easy!**

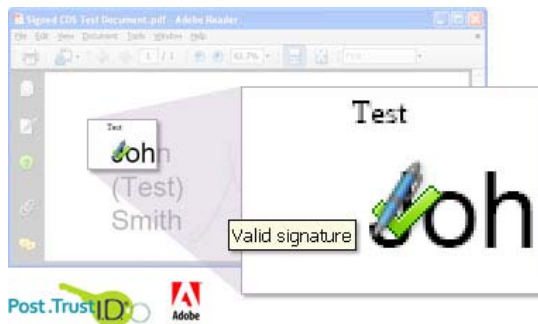

---

**Post.Trust I.D.® is a high assurance unique digital credential assigned to an individual for electronically signing Adobe® PDF documents.**

## Overview

Post.Trust's single-sign desktop document signing solution for Adobe® Certified Document Services (CDS) is called Post.Trust I.D.®. Post.Trust I.D.® is targeted at the 'lite user' with a low volume requirement to digitally sign Adobe® PDF documents (See Product Comparison). Using Post.Trust I.D.®, documents are signed electronically within Adobe® Acrobat Professional on a document-by-document basis. Users can configure the appearance of the electronic signature to include a graphical image e.g. your company logo or your handwritten signature.

## A personal cryptographic hardware device

Post.Trust I.D.® is a high assurance unique digital credential assigned to an individual for electronically signing Adobe® PDF documents. It is issued on a SafeNet iKey 2032 USB token – a powerful, two-factor authentication personal cryptographic hardware device. Not only do these tokens eliminate the need for expensive readers in the case of smartcard technology, but they are also extremely portable and compact.

## Fully Accredited

Post.Trust I.D.® is fully compliant with the EU Electronic Signatures Directive 1999/93/EU and the eCommerce Act, 2000. The eCommerce Act 2000 provides for the legal recognition of electronic signatures, electronic writing and electronic contracts so as to ensure that electronic communications are not treated any differently under the law, than traditional paper-based communications. Business users can therefore confidently use

Post.Trust I.D. in a range of communications which previously relied upon the traditional pen and paper signature. For businesses that rely on handwritten signatures in a document exchange or workflow process, significant cost savings can be achieved by adopting Post.Trust I.D.®.

For electronic document exchange processes, Post.Trust I.D.® provides confidentiality, integrity, authentication and non-repudiation. In other words, the receiver of an Adobe® PDF document that has been digitally signed using Post.Trust I.D.® can be certain of the authenticity of the communication source and that the document has not been altered by a third party. Non-repudiation means the sender cannot deny that he/she sent the document. In order to establish non-repudiation, the digital signature (authenticates the document) and the digital certificate (authenticates the owner of the signature) are relied upon.

**Post.Trust I.D.® is a unique digital credential assigned to an individual for signing Adobe® PDF documents.**
