

The Seal of Trust for Your Adobe PDF Documents™

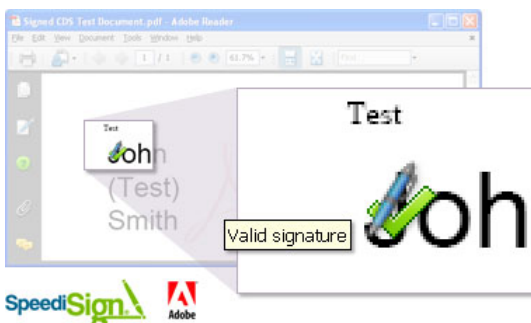

Accessible and easy-to-use, SpeediSign™ is the ultimate desktop document batch signing solution for securing and verifying the integrity and authenticity of Adobe® PDF documents.

Overview

Post.Trust's volume-based desktop document signing solution for Adobe® Certified Document Services (CDS) is called SpeediSign™. SpeediSign™ is targeted at the 'power user' with a high volume requirement to digitally sign Adobe® PDF documents (See Product Comparison). The SpeediSign™ product offering includes a unique digital credential (Post.Trust I.D.®) issued on a secure USB token plus a volume signing license. Using SpeediSign™, users can batch sign multiple Adobe® PDF documents with Adobe® Acrobat Professional. Users can also configure the appearance of the electronic signature to include a graphical image e.g. your company logo or your handwritten signature.

SpeediSign™ is fully compliant with the EU Electronic Signatures Directive 1999/93/EU and the eCommerce Act, 2000. The eCommerce Act 2000 provides for the legal recognition of electronic signatures, electronic writing and electronic contracts so as to ensure that electronic communications are not treated any differently under the law, than traditional paper-based communications. Business users can therefore confidently use Post.Trust I.D. in a range of communications which previously relied upon the traditional pen and paper signature. For businesses that rely on handwritten signatures in a document exchange or workflow process, significant cost savings can be achieved by adopting SpeediSign™. SpeediSign™ works seamlessly with Adobe® Reader® and Acrobat Professional. This means that recipients of Adobe® PDF documents signed using SpeediSign™ can be assured of their integrity and authenticity using only the freely available Adobe® Reader®.

Volume-based Signing

SpeediSign™ can be purchased at volumes of 1 to 1,000, 1 to 5,000 and 1 to 15,000 documents with a validity period of 1 year. The secure USB token that the unique digital credential Post.Trust I.D.® is issued on is a SafeNet iKey 2032 - a powerful, two-factor authentication personal cryptographic hardware device. Not only do these tokens eliminate the need for expensive readers in the case of smartcard technology, but they are also extremely portable and compact.

For electronic document exchange processes, SpeediSign™ provides confidentiality, integrity, authentication and non-repudiation. In other words, the receiver of an Adobe® PDF document that has been digitally signed using SpeediSign™ can be certain of the authenticity of the communication source and that the document has not been altered by a third party. Non-repudiation means the sender cannot deny that he/she sent the document. In order to establish non-repudiation, the digital signature (authenticates the document) and the digital certificate (authenticates the owner of the signature) are relied upon.

Accessible and easy-to-use, SpeediSign™ is the ultimate desktop document signing solution to securing and validating Adobe® PDF documents.

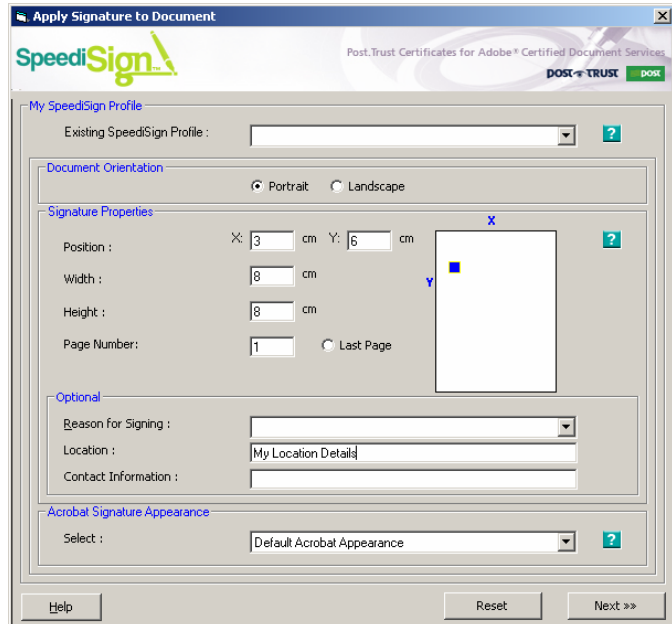

SpeediSign™ Benefits

- A desktop document signing solution for applying digital signatures to Adobe® PDF documents using Adobe® Acrobat
- Batch sign multiple Adobe® PDF documents through an easy-to-use wizard-style interface.

- Store multiple SpeediSign™ Signature Profiles against your Post.Trust I.D.® digital credential.
- Automatically validates the authenticity of a documents content and verifies the author's identity using Adobe® Reader®
- Secure and reliable Adobe® PDF document exchange
- Reduce paper and distribution costs
- Enhance your corporate image with professional electronic communications

How SpeediSign™ Works

SpeediSign™ is an innovative solution by Post.Trust to simplify the process of signing multiple Adobe® PDF documents. SpeediSign™ builds on the inherent value of a Post.Trust I.D.® digital credential to provide an easy-to-use graphical user interface that integrates with Adobe® Acrobat Professional for a richer experience.

Configure Your SpeediSign™ Profile

The user simply starts the application and selects a number of options for multiple Adobe® PDF document signing either through a folder selection or multiple file selection. Users can create multiple document signing profiles that can be saved for use at a later stage depending on the type of batch process the user is executing. For example, a user can create a signature profile for legal documents and another profile for financial documents.

SpeediSign™ also manages the licensing count and alerts the user when their licensing quota is about to run out. Alerts are also provided to users when their Post.Trust I.D.® unique digital credential is about to expire.

SpeediSign™, together with Post.Trust I.D.® and the Adobe® CDS programme, facilitates multiple Adobe® PDF document signing through this intuitive wizard-style environment.

Features:

- Simple user interface for batch Adobe® PDF signing
- Document signing count
- Certificate expiry notification
- Signature profile configuration
- Supports multiple signature profiles
